1.2. Out-of-Scope items	2
2. Project Goals	2
3. Project Deliverables	2
4. Team Roles	2
5. Project Equipment	2

1. Overview

Give general overview of your potential project. Provide a background and description of the selected project. Define the project scope and out-of-scope items.

1.1 Project Scope

List below items that you will be focused on.

1.2 out-of-Scope items

If needed list below items that you will not be testing

2. Project Goals

Identify project goals. What do you want to achieve at the end of your project?

The goals should be SMART(Specific, Measurable, Agreed Upon, Realistic and Time-based). Start with a verb and it should be measurable e.g.

- 1. Research/Learn*
- 2. Create/ Design*
- 3. Configure/Perform*
- 4. Analyze*
- 5. Validate/Test*

3. Project Deliverables

What result you will be sharing with your audience at the end of the class? e.g.

- An analysis of the data collected from the custom system.*
- A proof-of-concept demonstration of intrusion detection in a simulated internal network.*
- A final product or functioning application (program)*
- Automated process(es)/systems*
- A professional report with findings of: e.g. vulnerable systems*
- Provide risks mitigations and cybersecurity policies of analyzed systems*

4. Team Roles

Identify responsibilities of every member involved in your project

5. Project Equipment

List all the equipment, tools and resources that you are planning to use during your project

Project Gantt Chart

Create a Gantt chart for your project that shows on it all milestones, subtasks required to achieve them, their lengths and people responsible to achieve them.

This should be a separate (Microsoft Project) MPP document
